The contribution of GBEP's work on sustainability to the project "Fostering Sustainable Feedstock Production for Advanced Biofuels on underutilised land in Europe - FORBIO"
FAO Headquarters, Room tbc
Rome, 27 November 2018

FORBIO is an EU-Horizon 2020 project (that began in January 2016 and is expected to be finalized by December 2018), aiming to foster the integration of advanced biofuels into the development of the energy and agricultural sectors in Italy, Germany and Ukraine. The GBEP sustainability indicators for bioenergy represented the starting point for the sustainability assessments of the FORBIO project.

This workshop will be the opportunity to present the results of the project focused on advanced biofuels, and share experiences and lessons learned about the different use and implementation of the GBEP indicators to favor a sustainable development of bioenergy.

During the GBEP meetings held in Rome, in November 2014, it was suggested to develop an Implementation Guide on the use of the GSIs, in order to:

- Facilitate the testing and implementation of the GSIs by future users, enabling them to take advantage of relevant lessons learned; and
- Clarify and explain in more detail some identified issues within the methodology sheets in the 1st edition of the “Global Bioenergy Partnership Sustainability Indicators for Bioenergy” report, by:
  - Ensuring a better integration of definitions and methodologies;
  - Ensuring an effective implementation of the indicators; and
  - Enhancing the practicality of the indicators.

A scope of work of the Task Force on Sustainability for the production of an Implementation Guide on the use of the GBEP Sustainability Indicators for Bioenergy (GSIs) was developed and further endorsed by the GBEP Steering Committee in 2015. Since then the Task Force has been working towards the development of the Implementation Guide through regular teleconferences of the three re-instated sub-groups on the Environmental (led by Germany), Social (led by Argentina and FAO) and Economic (led by Japan and Italy) indicators. In addition to this, progress was made in the development of a technical report on Attribution.
